Introduction

Chesterfield Borough Council's Housing Service is responsible for the day-to-day management and repair of over 9,500 houses, flats, maisonettes and bungalows across 24 estates. It is also responsible for planned maintenance and improvement and modernisation programmes to meet targets set by the Government under the Decent Homes Standard.

The Survey of Tenants and Residents (STAR) is a voluntary replacement for the STATUS tenant satisfaction survey. It was developed by HouseMark with input from landlords, tenants, National Housing Federation (NHF), Chartered Institute of Housing (CIH), Tenants and Residents Organisations of England (TAROE), Tenant Participation Advisory Service (TPAS) and market research companies.

The survey enables social housing providers to have a means of comparing key satisfaction results with other providers. STAR is more flexible on method than STATUS was. However for comparative purposes, social housing providers undertaking HouseMark STAR benchmarking will be able to filter to remove those who have adopted a different method, should they so wish.

The STAR survey has been endorsed by the Tenant Participation Advisory Service (TPAS) and Tenants and Residents Organisations of England (TAROE).

Methodology

STAR methodology defines the measures of confidence level and sampling error/margin of error that are needed to give statistical validity to the results. For STAR, the margins of error for satisfaction results reported by stock type to HouseMark (see section 5 of *STAR features*) are:

Table 1: STAR margins of error at 95 per cent confidence level Population size	Required margin of error	Minimum number of replies (see table 2 for more details)
0 – 1,000	+ / - 5 per cent	Up to 275
1,000 – 10,000	+ / - 4 per cent	375 – 565
10,000 and above	+ / - 3 per cent	950 or more

To illustrate the meaning of a confidence level / margin of error combination, when quoting a result of 85 per cent of respondents to a survey being satisfied, using a confidence level of 95 per cent and a margin of error of +/- 4%, you would be saying that you are 95 per cent confident that the whole population's response would lie between 81 per cent and 89 per cent satisfied.

In accordance with STAR methodology, a postal questionnaire method was undertaken. During October 2015, the postal questionnaire was sent to a random sample of 3000 housing tenants in Chesterfield Borough. The sample was created by applying a computer-generated random selection function to the sample frame of all current tenants. For accuracy, results have been cross-tabulated with postal addresses to indicate areas of residence. The survey was completed by 596 residents, giving a confidence level of 95% and a margin of error of around 4%. The results of the survey are shown below. Please note responses may not add up to 100% due to rounding.
